

Washington State Immunization Information System Update:

A new release of the Washington State Immunization Information System (WA IIS) is moving into production this weekend. There are fixes for a few items in the Vaccine Ordering and Management module (VOMS). This document lists a summary of those changes.

Vaccine Ordering

- Local Approvers are once again able to enter vaccine orders on behalf of providers. Our standard is for all providers to enter their own orders in the IIS. We recognize, however that there are times when it is necessary for an LHJ to enter an order for a provider.
- Most of the issues with Recommended Order Quantity have been resolved. Providers will start to see recommended order quantities when they enter the physical inventory on their vaccine orders beginning in March.

Inventory Management

- Lot Number Summary Report: If the provider adjusts the doses administered on the Reconciliation screen, the adjusted amount now displays correctly in the Doses Adjusted column. The amount is now subtracted only once from the total.

Known Issues – We're continuing to work on fixes for these issues

- Provider Agreements may not display correctly for some providers if the facility has been merged with another or if the Organization (IRMS) has changed.
- Providers with more than eight (8) providers listed on the Authorized Providers screen will only see the first eight providers on the printed agreement.
- Providers with more than two (2) vaccine storage units on the Cold Storage screen will only see the first two units on the 2014 printed agreement.
